

ESHWAR SRINIVASAN

Boston, MA | srinivasan.e@northeastern.edu | (617) 778-3192 | [Linkedin](#)

EDUCATION

Northeastern University, Boston, MA

Dec 2026

Master of Science in Robotics

Concentration: Electrical and Computer Engineering (EECE)

Coursework: Robot Sensing and Navigation, Mobile Robotics, Robot sensing & Navigation, Control Systems Engineering

Hindustan Institute of Technology and Science, Chennai, Tamil Nadu, India

May 2023

Bachelor of Science in Avionics

GPA:3.354

Coursework: Aircraft Aerodynamics Structure & Systems, Electrical & Electronic Fundamental Systems, Basic Aerodynamics, Propulsion

TECHNICAL SKILLS

Software: Solidworks, AutoCAD, Blender, Gazebo, Github, Microsoft360

Hardware: PCB Fabrication, Soldering, circuit designing, Component service and testing

Technical Documentation: Knowledge-base article writing, Documentation process, Troubleshooting documentation

Programming & OS: Python, C, Windows, Linux, Ros

Certifications: Diploma – Aircraft maintenance engineering, Solidworks & autoCAD, Printed circuit board (PCB), Programmable logic control (PLC)

WORK EXPERIENCE

Design Engineer, Delta Hydrotech, Chennai, India

Jan 2023-Jan 2024

- Designed and customized hydraulic cylinders, hydraulic power packs, and hydraulic operated special purpose machine
- Maintained and serviced special purpose machines

Blue Dart Aviation Limited, Chennai, India

Feb 2023-Apr 2023

BOEING 757 – PCF (PASSENGER CONVERTED FLIGHT) 200

- Gained extensive experience and knowledge in maintenance, quality control, safety regulations and the repair of aircraft systems including engines, electrical systems, and hydraulic systems
- Assisted aircraft maintenance engineers in pre-flight inspections and scheduled line maintenance as a part of CAR (civil aviation requirements)- 147

PROJECTS

Autonomous Ornithopter (Independent)

Present

- Designed and developed a bio-inspired ornithopter focused on flapping-wing flight mechanics and efficiency.
- Researched and applied aerodynamics of flapping wings, including lift generation, thrust, and wing kinematics.
- Designed mechanical flapping mechanisms (crank-rocker, linkage systems) using tools like FlapDesign and Ornithopter Crank Designer, performed motion and aerodynamic analysis using Ptera and simulation-based approaches.
- Planned electronics architecture, including motors/actuators, power systems, and control logic for future flight testing.

Rotating Table Machine

Sep 2023-Dec 2024

- Designed and developed an automated sorting machine for directing grist rice sacks using a rack and pinion mechanism powered by a pneumatic cylinder.
- Integrated a load cell within the rollers to detect sack weight and send signals to the pneumatic control unit.
- Designed a 90-degree rotation system to route sacks to the appropriate conveyor based on weight classification above 50 kg

Debagging Machine for Ethanol Processing

Apr 2023-Jul 2023

- Designed, manufactured, and PLC-programmed an automated machine for separating rice grist from bags.
- Implemented a guide pin system to hold and penetrate the sack for controlled debagging.
- Engineered a precision cutting mechanism with X-axis cutting and Y-axis pneumatic lifting for minimal bag damage.
